the boot

Manufactured in Australia by ZCG, the GID-M510 elevated

feed ground independent UHF mobile antenna offers effective

GIDM series antennas have a detachable stainless steel black

The modest size and light weight design makes this antenna an

excellent choice for mounting in various positions on a vehicle or

4.5 metres of RG58 low loss stranded cable bottom exits through

the mount base. Cut the cable to the shortest length necessary

A detailed specification sheet is available to download from our

The antenna has been tuned in the factory to cover the full UHF

VSWR has been optimised to better than 1.5:1 across the full

No metal ground plane is necessary for the antenna to operate

Typical mounting positions for this antenna are to a vehicle bull bar or guard, the boot of a sedan or truck mirror using the appropriate bracket with minimum 12.7 mm  $(\frac{1}{2})$  diameter hole.

The antenna can also be mounted in locations other than on a

The high quality brass, delrin, chrome and stainless steel

components also make the antenna perfectly suited for use in

To achieve best performance from your antenna, these are the

important principles you should consider when selecting the

Mount the antenna as far away from other antennas and

metallic objects as possible to avoid interference and distortion of the 360° omnidirectional pattern. At least 350 mm side clearance is desireable, preferably more.

ZCG Scalar, Head Office, 7 Hall Street, PO Box 7, Lindenow, Victoria, 3865, Australia

Mount the antenna in as high a place as possible.

3. Mount the antenna vertical, not at an angle.

Telephone (03) 5157-1203, Fax (03) 5157-1641

prior to fitting the UHF male solder connector provided.

diagram.

rating is 50 watts.

Installation is now complete.

Remove the nut and washer from the threaded base and slip

them off the cable. Pass the cable through the hole of your

Thread the washer and then the nut back up the cable and onto

From underneath, tighten the nut to secure the antenna firmly to

IMPORTANT : Leave some slack in the cable at the point

where the cable bottom exits the threaded base so as not to

Route the RG58 cable carefully to your radio. Ensure that the

cable is not stretched excessively and there are no sharp kinks.

Use cable ties, but do not pull so tight as to crush the cable. A

damaged feeder cable is a cause of high VSWR and reduced

We recommend that you cut the cable to the shortest length

necessary, prior to fitting the UHF male connector provided. Carefully strip the end of the coaxial cable as shown in the
