

Hoisting Stocking Grips

For 1/2" or 7/8" Coaxial Cable

Hoisting stockings provide a reliable cable installation method which ensures neither the external cable jacket, foam dielectric or centre core is damaged during the hoisting process.

These stockings are re-useable time and time again.

The stocking is laced around coaxial cable over a 30cm (1 foot) length. The single or double eyelets allow a high pulling force with the least amount of stress to the coaxial cable.

Specifications	HS1250
Cable Type	1/2" coaxial cable
Construction	Non-magnetic, tin coated bronze
Eyelet	Double

Specifications	HS7850
Cable Type	7/8" coaxial cable
Construction	Non-magnetic, tin coated bronze
Eyelet	Single
